Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

IN THE TITLE:

The title has been changed to:

--A METHOD OF DRIVING A DISPLAY USING NON-NEGATIVE MATRIX FACTORIZATION TO DETERMINE A PAIR OF MATRICES FOR REPRESENTING FEATURES OF PIXEL DATA IN AN IMAGE DATA MATRIX AND DETERMINING WEIGHTS OF SAID FEATURES SUCH THAT A PRODUCT OF THE MATRICES APPROXIMATES THE IMAGE DATA MATRIX--

Reasons For Allowance

2. The following is an examiner's statement of reasons for allowance: claims 1-18, 33-37, and 39-51 are considered allowable since when reading the claims in light of the specification, as per MPEP §2111.01 or *Toro Co. v. White*

Art Unit: 2129

Consolidated Industries Inc., 199 F.3d 1295, 1301, 53 USPQ2d 1065, 1069 (Fed. Cir. 1999), none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims, specifically driving a display using non-negative matrix factorization as disclosed in independent claims 1, 35, 36, and 50 of the instant application.

3. The above limitations find support, for example, at pg. 7-8, 11-12, and 21-40 of the originally filed specification of the instant application.

4. A practical application for the invention is disclosed on page 6-7: "In one preferred embodiment of the method the data comprises data for an image to be displayed (the physical entity represented by the data may be considered as an image stored as an electrical signal). One particular advantage of embodiments of the described method for this (and other) applications is the great improvement in processing speed which is obtainable, typically an improvement by a factor of between 20 and 40 over conventional techniques. This makes embodiments of the method suitable, for example, for implementing multi-line

addressing schemes when displaying real-time video."

5. The Prior art of reference *Lee et al.* (*Lee*), "Learning the parts of objects by non-negative matrix factorization", 1999 discloses a method of digitally processing data in a data array defining a target matrix (X) using non-negative matrix factorization to determine a pair of matrices (F, G), a first matrix of said pair determining a set of features for representing said data, a second matrix of said pair determining weights of said features, such that a product of said first and second matrices approximates said target matrix, the method comprising: inputting said target matrix data (X); selecting a row of said one of said first and second matrices and a column of the other of said first and second matrices; determining a target contribution (R) of said selected row and column to said target matrix; determining, subject to a non-negativity constraint, updated values for said selected row and column from said target contribution; and repeating said selecting and determining for the other rows and columns of said first and second matrices until all said rows and columns have been updated.

Lee does not teach driving a display using non-

negative matrix factorization as specified in the independent claims of the instant application.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
